Habitat cutouts

Kindergarten-Grade 2 with support | 20-30 minutes | Sort, count, and tell a story

Gather

These pages, crayons, scissors, and a pencil. Glue is optional: leave the animal cards loose so you can try another arrangement.

Make together

1. Decorate the two habitat mats on page 2.
2. Cut the animal cards on page 3, or let an adult prepare them.
3. Discuss food, water, and shelter. Place each card in Pond, Woodland, Both, or Not sure. Put Both cards between the mats.
4. Record one mark per card on page 4, then compare your groups.

Ways to join in

An adult stays nearby for scissors and assembly. Offer left- or right-handed scissors as appropriate. A child may point, draw, use AAC, direct a partner, or ask for help. For a no-cut version, leave the page whole and point to the pictures.

Practice with your hands

Cutting straight borders and rounded corners, moving and placing cards, coloring, and making marks. Children can point while a partner moves the cards or records the marks.

Tell a story

One animal is looking for shelter. What does it need? Another animal offers an idea. How could they listen and make a plan together? Animals do not all need the same home.

Connect to the website

Use with Animal Habitat Sorting & Tally Charts. These are simplified habitat examples. Real habitats vary, and several animals use both water and land. Explore a local animal with an adult if you are unsure.

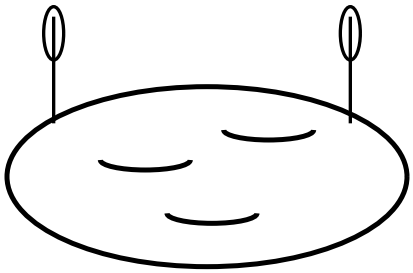

Print on US Letter paper at 100% / Actual size. Black-and-white copies work well. You may print, copy, and adapt these original pages for your home or classroom. Skill practice is flexible; these pages are not an assessment or therapy program.

Places to live

Add food, water, and shelter. Keep the middle space for animals that use both.

POND

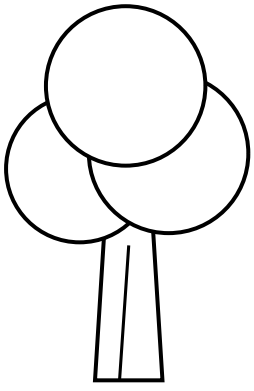

Water, plants, muddy edges, and places to shelter.

BOTH: place cards between the mats and explain your idea.

WOODLAND

Trees, soil, leaves, and places to shelter.

You can leave this page whole. Move the cards gently; there is more than one way to explain a choice.

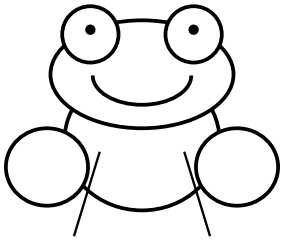

Animal cards

Some animals use more than one habitat. Talk about what each animal needs.

CUT thick outside borders

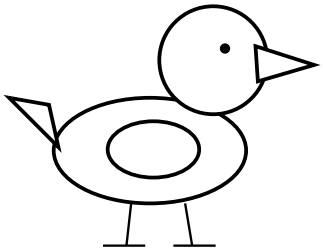

Thin lines are for coloring.

Frog

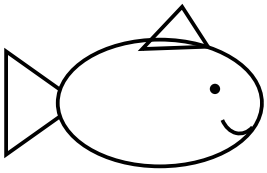

Water for eggs; damp land for many adults.

Duck

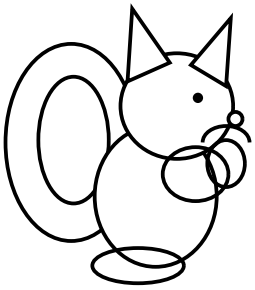

Water to feed or swim; land to rest or nest.

Fish

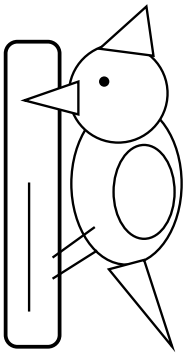

Fresh water, oxygen, food, and shelter.

Squirrel

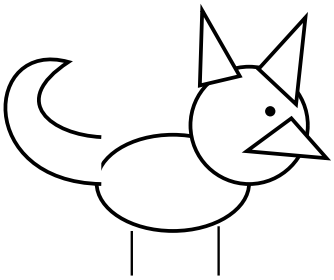

Trees for shelter; seeds and nuts for food.

Woodpecker

Trees for nesting and finding food.

Fox

Shelter and food in woods, fields, and edges.

Our habitat picture data

Choose one group for each card. A card in Both is counted once in the Both row.

Put one tally mark and shade one box for each animal card in that group. An adult can help count or group tallies in fives. The six cards should make six marks altogether.

GROUP	TALLY MARKS	ONE BOX = ONE CARD
Pond	_____	☐ ☐ ☐ ☐ ☐ ☐
Woodland	_____	☐ ☐ ☐ ☐ ☐ ☐
Both	_____	☐ ☐ ☐ ☐ ☐ ☐
Not sure	_____	☐ ☐ ☐ ☐ ☐ ☐

The group with the most cards is _____.

A group with fewer cards is _____.

Choose a card you want to learn more about: _____

What resource does that animal need? _____
